Claims

- 1. Polyurethane resin, obtainable by
 - a) reacting 1-isocyanato-5-isocyanatomethyl-3,3,5-trimethylcyclohexane (isophorone diisocyanate (IPDI) alone or together with one or more aliphatic diisocyanates, with a polyether polyol having an average molecular weight in the range of 1000 to less than 3000 g/mol;
 - b) adding a diamine;
 - c) adding a polyol having an average molecular weight of equal or less than 800 g/mol; and
 - d) optionally reacting the product obtained in steps a) to c) with at least one terminating agent

wherein the ratio of equivalent weights of diisocyanates to the group of isocyanatereactive components consisting of the said polyether polyol, the said diamine, the said polyol, and the said terminating agent is 1:1 or greater than 1.

- 2. Polyurethane resin according to claim 1 or 2, wherein the ratio of equivalent weights of disocyanate components to said polyetherpolyol is in a range of between 3,6: 1 and 1:1, preferably about 2:1.
- 3. Polyurethane resin according to any of claims 1 to 3, wherein the polyether polyol is poly-THF2000.
- 4. Polyurethane resin according to any of claims 1 to 4, wherein the diamine is isophorone diamine.
- 5. Polyurethane resin according to any of claims 1 to 5, wherein the polyol is 1,4-butanediol.
- 6. Polyurethane resin according to any of claims 1 to 3, having a weight average molecular weight in the range of 20000 to 80000 g/mol, preferably between 25000 to 55000 g/mol.

- 7. Polyurethane resin according to any of claims 1 to 6, having a degree of urethanisation between 20 and 30%.
- 8. Method of forming a polyurethane resin, comprising the steps of
 - a) reacting 1-isocyanato-5-isocyanatomethyl-3,3,5-trimethylcyclohexane (iso-phorone diisocyanate (IPDI) alone or together with one or more aliphatic diisocyanates, with a polyether polyol having an average molecular weight in the range of 1000 to less than 3000 g/mol;
 - b) adding a diamine;
 - c) adding a polyol having an average molecular weight of equal or less than 800 g/mol; and
 - d) optionally reacting the product obtained in steps a) to c) with at least one terminating agent

wherein the ratio of equivalent weights of diisocyanates to the group of isocyanate-reactive components consisting of the said polyether polyol, the said diamine, the said polyol, and the said terminating agent is 1:1 or greater than 1.

- 9. A coating composition, preferably printing ink, comprising a solvent and at least one polyurethane resin according to one of the claims 1 to 8 as film forming binder.
- 10. Use of a polyurethane resin according to claims 1 to 8 as at least one film forming binder in printing inks for printing plastic substrates, preferably polyolefinic plastic substrate.
- 11. Method of producing a laminate carrying a printed layer, said method comprises the steps of
 - a) providing a coating composition, preferably a printing ink according to claim 10;
 - b) applying a layer to a first substrate, preferably a plastic foil, by printing said printing ink of step a) in a flexographic and/or gravure printing process;

- c) removing said solvent from said layer thereby drying and/or curing said layer obtained in step b),
- applying an adhesive to the dried and/or cured layer obtained in step c) and producing the laminate by applying at least a second substrate, preferably a plastic foil, on the adhesive.
- 13. Laminate produced by the method of claim 12.
